Software
made in Germany

Embedded Software

We are specialists in software for embedded systems with high safety and quality requirements.

We bring increasing complexity of your products, economic efficiency and your specific demands into harmony.

Our solutions are tailored for your quality and safety requirements.

Together, we will lead your projects to success!

You will benefit from our expertise in the following fields:

- Functional Safety
- Software architecture and requirements engineering
- Safe and efficient implementation
- Resource optimization
- Module, integration and system test

We offer you:

- Custom-tailored solutions
- Personal contact
- Expertise in current technologies
- Motivated, dynamic team

Automotive Software

In the field of automotive software we work directly with well-known manufacturers and suppliers, using cutting-edge technologies:

- AUTOSAR
- Automotive Ethernet
- Driver assistance systems and autonomous driving

We are experienced in the software development of various electronic control units:

- ABS/ESC systems
- Electronic theft protection
- Driver assistance systems and autonomous driving

We will be at your side during the entire development process and support software design up to ASIL-D as well as implementing the ISO 26262.

Trainings

To enhance the knowledge of your professionals, we offer you the following trainings:

- C/C++
- Functional Safety
- AUTOSAR
- Embedded Linux
- Embedded Engineering
- Realtime Engineering

Each course is offered both for beginners and advanced attendees. Find out about current training sessions on HANECS.de
